

500 final-years in 7 days on ₹2,000

Don't buy reach. Borrow trust: classmates forward it into groups students already read, and a referral loop compounds every share.

WHO WE TARGET

- Final-year B.Tech / BE students, 2027 batch
- Tier-2/3 colleges in Telangana and AP first: tight WhatsApp networks, close to NxtWave's Hyderabad base
- CSE, IT and ECE, plus non-CS branches aiming for IT jobs
- Reached through class, department and placement WhatsApp groups

WHY THEY'D CARE

- It's placement season, and interviewers ask "have you built anything with AI?" Most have used ChatGPT. Few have shipped anything
- Their final-year project topic is due this semester
- They're short on time: only short, free things with a concrete result get a yes

WHAT MAKES THEM REGISTER

- An outcome, not a topic: a live AI project link for the resume, built tonight
- 60 minutes, free, Sunday 6 PM: no drives, no classes
- Sent by a classmate, not an ad
- Friends already in, shown on a college leaderboard
- No AI experience needed

Why I trust this: *I'm a final-year student myself. In my batch, the forwards people open come from the class rep or the placement group, never from ads.*

Three channels and one loop, picked for trust

WHAT WE DO	WHY IT WORKS	SIGN-UPS
1 Student champions. 25 class reps, placement coordinators and club leads (20 active) forward a tracked link and a ready-made message into their class and placement groups.	A classmate's message in a group they already read. Costs ₹0, and every link is measured.	210
2 Club co-hosts. 5 tech clubs co-host the session and push it through their Instagram, email lists and member groups.	Official credibility, and clubs need events for their activity reports.	80
3 Paid test, ₹800. Two ₹400 shout-outs on 2027-batch placement-update pages (Telegram, Instagram). Cut the loser after 24 hours.	Reaches colleges with no champion. A test, not a pillar.	65
4 Referral loop. Every sign-up gets a personal link and a one-tap WhatsApp share. Rewards at 3, 5 and 10 friends; the top 3 win ₹500 / ₹300 / ₹200.	Each student brings ~0.3 more, so every channel above is worth about 1.4x.	+160

DELIBERATELY NOT DOING

Meta ads: ₹2,000 buys a few hundred cold clicks, and "final-year" can't be targeted

Cold email or bought lists: low trust, spam risk

20 small ideas: no focus, nothing measurable

Not counted: NxtWave's own channels. Pure upside

The math: ~550 expected, 90% odds of clearing 500

CHANNEL	REACH	VISITS	SIGN-UP RATE	SIGN-UPS
Student champions	$20 \times 300 = 6,000$	$10\% \rightarrow 600$	35%	210
Club co-hosts	$5 \times 400 = 2,000$	$10\% \rightarrow 200$	40%	80
Paid test (₹800)	~10,000 views	$3\% \rightarrow 300$	~22%	65
Owned + direct	My LinkedIn, network	~100	35%	35
Sign-ups before referrals				390
Referral loop	25% share $\times$ 1.2 friends each	$k \approx 0.3$		+160
Expected total				≈ 550

₹2,000, mostly paid on results

- ₹1,000 Prizes for the top 3 referrers, paid after attendance
- ₹800 Paid test: two ₹400 shout-outs on day 2
- ₹200 Day-6 boost, only for a channel under ₹12 per sign-up
- ₹0 Tools: Sheets, Apps Script, WhatsApp, Canva, Vercel

$\approx$ ₹3.6

per sign-up, if the full ₹2,000 is spent

Downside plan. The worst simulated run reached 463. If day 4 is 10%+ behind, add 5 backup champions from the top colleges (~+50) and run a second WhatsApp wave.

Final sign-ups in 100 simulated 7-day campaigns (median 548)

Seven days, steered by a nightly dashboard check

DAY	THE MOVE	CUMULATIVE TARGET
Day 1 · Mon	Recruit 25 champions and 5 clubs. Page goes live. Seed my own network	30
Day 2 · Tue	Wave 1 into class and placement groups. Both paid posts go live	145
Day 3 · Wed	Clubs announce. Kill the weaker paid post	250
Day 4 · Thu	Referral push: "one friend from a reward" + college leaderboard	325
Day 5 · Fri	Wave 2 with proof: "300+ final-years in" + a 15-sec demo clip	415
Day 6 · Sat	Last call. ₹200 reserve to the best paid channel	490
Day 7 · Sun	Morning last call and reminders. Workshop at 6 PM	540

Sign-ups only count if people show up. So every sign-up gets a calendar invite, plus WhatsApp reminders the day before, 2 hours before and 15 minutes before.

Every night at 9 PM, six rules decide tomorrow

Behind plan by 10%+ → second WhatsApp wave and backup champions

Paid post over ₹25 per sign-up after 24 hours → kill it

Champion still at 0 after 24 hours → send a fresh forward, then replace them

Viral coefficient under 0.2 from day 3 → send "one friend away" nudges

Fewer than 70% final-years → tighten the copy on the leaking channel

5+ referrals in 15 minutes → hold rewards until attendance

These run in the console as "Today's decisions"

What I built: the engine this plan runs on

Sign-up page. 20-second form on a phone. Every student gets a personal link, one-tap WhatsApp share, rewards at 3, 5 and 10 friends, and live student and college leaderboards.

Growth console. Plan vs actual, a funnel for every channel and champion (visits → sign-ups → their referrals → ₹ per sign-up), and "Today's decisions" from the six rules.

Google Sheet backend. No server, never sleeps, and the team can open the sheet. Blocks duplicates, flags throwaway emails and referral bursts, keeps phone numbers private.

Plan simulator. Replays the 7 days from this deck's assumptions. Backed by 10 automated tests.

You're in, Shyamraj!

We'll WhatsApp you the joining link a day before. Add it to your calendar so you don't miss it.

3 5 10

3 friends AI Project Starter Kit: prompts, templates and 3 more project ideas

5 friends Priority Q&A slot + "Campus Builder" certificate

10 friends 1:1 project review with a mentor + LinkedIn shout-out

Console on day 4 of a simulated campaign: behind plan, so the rules fire. Kill the weak paid post, review a suspicious referrer, nudge silent champions.
